217 alternating current circuits 11. (a) when the rms voltage across the inductor is greater than that across the capacitor, the voltage across the rcl combination leads the current (see section 23.3). 12. (d) since  $i_{rms} = v_{rms} / z$  (equation 23.6), the current is a maximum when the impedance  $z$  is a minimum. Audio Book Online Physics Ch23 Answer Circuits

Answer: bce. to establish an electric circuit, charge must be moved from low energy to high energy. once at high energy, the charge spontaneously flows through the conducting wires and other conducting elements of the circuit back down to the low energy terminal. a battery's role is to supply the energy which is required to move the charge from the - terminal to the + terminal of the battery.
